

Tetrapharma S.p.a.

Tetrapharma S.P.A. was formed in 2002 as the result of the development of the acquisition of scientific, technological, productive and professional experiences matured within the national and international druggist production, and as previous entrepreneurial initiatives were not enough for the innovative plan we were carrying out.

The members of the company that have joined to the initiative, are specialized in this specific field and therefore in a position to covering some essential roles in the enterprise activity, offering ulterior guarantees to those already important of the professional experience.

Promoter of this initiative and the relative plan of development, is Stefano Napoleoni, whose curriculum in the druggist field, offers plenty of guarantees of entrepreneurial ability, technical experience and of innovative will within a system, which can, for its substantial impermeability towards new subjects, only accept enterprises that have peculiar characteristics: original and pertinent. Tetrapharma S.P.A. enters to full authority in the druggist field, being for sure a subject with alternative characteristics.

The plan, in its essential lines, was shaped and has been subsequently confirmed, like a “decentralized” productive solution, essential, autonomous and economically competitive on particularly interesting levels.

Today Tetrapharma S.P.A., after only few years, has a complete managerial and productive structure, and has in Mogadishu in Somalia an efficient productive unit which is in conformity to the beginning hypotheses. The production of drugs has been started with happening and the qualitative controls have given wide satisfactory results.

Our mission and its “ITALIANITY”

The strategic and productive objective of Tetrapharma, is the production and distribution to low cost of essential generic drugs in the underdeveloped nations, following the European protocols of production.

The Tetrapharma products, still being high-quality products, are distributed to prices that are of approximately five times inferior to those of the druggist multinationals. This is due to the modern criteria of production and the extinction of the rights on the licences. All the Tetrapharma products are therefore perfectly legal and the company respects with scruple, all the international norms in druggist matter.

Beyond producing, Tetrapharma effects programs of formation of staff specialized in the druggist field, creating therefore the indispensable conditions for the realization of those priority objects for the local development, among which the technical and professional autonomy of the employee must excel. Also in so far Tetrapharma works for the future of the areas where she inserts the own initiative.

The characteristic however that particularly distinguishes the acts of Tetrapharma, is its "Italianity". It shall not seem a chauvinistic affirmation, rhetorical, conceited and therefore outside place. On the contrary, since the solutions elaborated from our company, are the fruit of the ability to rethink, with creativity and without prejudgments, "the canonical" methods that seemed by now consolidate and defined, the affirmation is totally justified. The innovation - reading carefully the history of our Country and observing the notable testimonies - has been always one prerogative of the Italian talent that, also today, applied to the most different disciplines, makes the fortune of "made in Italy".

One of the primary scopes of the activity of Tetrapharma S.P.A. is therefore the export in the world of the Italian know - How, giving an impulse, modest for dimensions but perhaps important for the meaning that it represents, to the transformation of the Italian productive role, that it will have to be more and more distinguished from manufacturing activity and therefore projected into the invention, into the planning, into the cultural dimension, into the style and, in general terms, into the promotion of the quality of life.

And since drugs are one fundamental component of life quality, to make them available at high-quality and at reduced prices, where today they are rare or unavailable, we believe must be considered to reason a title of merit and a way to qualify the Italian image in "an sensitive" ambit, the one of health, which collects particular consents especially if it answers to vital requirements like those of the fight to the most diffuse pathologies; all that in the limit of the attainment of an enterprise profit of sure interest.

The productive structure

Tetrapharma S.P.A. is an enterprise which produces lifesaving drugs and therefore of primary importance for the human health: it has the legal head office in Rome and a productive unit of caps and compressed in Mogadishu - in Somalia; currently it is the only Italian company certified from the Government of Somalia, that carries out a complete industrial cycle from the raw materials to the finished product.

The production of drugs, in the various previewed druggist shapes, is supported from rigorous protocols and the use of raw materials of absolute excellence. The qualitative guarantees are issued in conformity with the champion verifications, entrusted to

specialized laboratories recognized by official organisms accredited by the European Union.

The construction of the system of Mogadishu has been planned by specialists of the field and realized with particularly evolved criteria, to the aim to obtain both, levels of efficiency comparable to the international ones, and a management and a constant maintenance of the complex, independently from the environmental conditions. The plant of Tetrapharma S.P.A. is, in fact, an independent structure in continuous evolution, both for the widening of the range of drugs, and for the increase of the volumes of production in connection with the crescent demanded in reference to market.

The priority productive choice has been oriented towards one essential drug range with a generic character and therefore deprive of licence ties. This allows the possibility of lifesaving drug supplies to low cost in all the underdeveloped nations, with particular attention for Africa, where today the availability of the same ones is tied to local economic factors.

The produced amounts, in continuous increase, already today concur to satisfy the requirements of immense geographic areas. In the mid term perspectives, the amounts preview the cover of the total requirements of the city areas of the Somalia and an important contributions to Africa pharmacological needs.

The characteristics and the technical-scientific preparation of the staff of Tetrapharma S.P.A., concur already today to continue in the program of integration with new products, obtaining the same qualitative guarantees and the levels of price of those in list.

The qualitative guarantees are available on request: it deals with official documents issued by organisms and institutes of search accredited by the European union, with extracts related to every product and to stock production, chosen to champion. The same is worth for the raw materials used, for the environmental hygienic conditions, for the systems of maintenance and for the criteria of packaging.
